

SELECTION OF TURBINE MODEL

PUBLIC CONSULTATION IN RESPECT OF A WIND ENERGY PROJECT IN THE TOWNLANDS OF MEENAMANRAGH, GRAFFY & DALRAGHAN MORE, GLENTIES, WITH A GRID CONNECTION FROM A PROPOSED SUBSTATION AT MEENAGRUBBY VIA THE TOWNLANDS OF MEENAMANARAGH, GRAFFY, BANGANBOY, STRACASHEL, MEENAMALARAGH TO THE TIEVEBRACK EIRGRID STATION AT DRUMNALOUGH, GLENTIES

While specific turbine types had been identified in earlier information uploads to the wind park website, the developers consider it more prudent to retain an open mind on the wind turbine model to be used. This will enable a broader choice of turbine to be made following a grant of planning permission, rather than restricting it to any particular model.

It is still proposed to develop eight turbines and for the purposes of environmental impact assessment, a turbine type with a maximum hub height of 84m, a maximum blade diameter of 132m and a maximum blade tip height of 150m will be utilised.
